Live and Historical Data

To maximize productivity and ensure the safety of your crane operations, **APRS World, LLC**, offers the **Crane Wind Speed Logger**. Bolted to the tip of the crane, our Crane Logger provides data logging for historical records of wind conditions and live data for safety and operational decisions. Our design philosophy is that data is most important. Data is downloaded wirelessly from a laptop computer running the supplied software. No cables to run. With an optional in cab **Wind Speed Display**, live data can be viewed by the crane operator.

- Industrial wind data logger, stainless steel housing, wireless
- Anemometer, Wind tunnel calibrated, accurate to 0.1 m/s
- Anemometer mount, pivoting, stainless steel
- Solar panel and mounting bracket for top of crane boom
- Transit cases, Pelican, nearly indestructible
